DRISHTANT LEUVA

Sydney, Australia | +61 432 228 411 | drishtantl@gmail.com
linkedin.com/in/drishtant-leuva | drishtantleuva.github.io

TECHNICAL SKILLS

- **Programming and analytics:** Python, SQL, R, pandas, NumPy, data preparation, statistical analysis and data validation.
- **Machine learning:** scikit-learn, regression, classification, time-series forecasting, model evaluation and SHAP explainability.
- **Applied AI:** Retrieval-augmented generation, GPT-4o integration, ChromaDB, semantic retrieval and evaluation of generated feedback.
- **Applications and reporting:** Django, Django REST Framework, PHP, REST APIs, relational databases, Streamlit, Power BI, advanced Excel and Git.
- **Business analysis:** Requirements analysis, translating business rules into software, stakeholder communication and technical documentation.
- **Cloud tools:** Azure Machine Learning Studio and Amazon S3.

PROFESSIONAL EXPERIENCE

University of Technology Sydney
Teaching and Research Experience

- Developed the Stormwater Requirements Calculator with Horizon Engineering, combining Python/Django, geospatial APIs, council rules and automated PDF reports. Handed the industry research tool over to the receiving team, which launched it.
- Built a Social Impact Calculator during master's research, analysing 161 carbon-credit projects and UN SDG indicators in Python. Used LLM-assisted claim screening and documented the methods in a thesis and first-author Springer chapter.
- Built SHIELD AI Tutor, a university research project using Python/Django, ChromaDB and GPT-4o. Grounded feedback in course materials, evaluated responses, controlled solution leakage and logged students' reliance on AI hints.
- Analysed academic research datasets using Python, statistics and machine learning, and documented findings in technical reports.
- Conducted requirements analysis and quantitative and qualitative research as a part-time Research Assistant, producing recommendations for technical and non-technical stakeholders.
- Teach Business Intelligence, Introduction to Information Systems, and Business Process and IT Strategy as a Casual Academic Tutor, using practical business examples.

eClinicalWorks
Data Scientist

- Analysed healthcare practice data using Python and R to identify best-earning practices, compare practice-level financial performance and investigate revenue patterns.
- Worked on time-series forecasting of eClinicalWorks software support cases, examining case-volume patterns over time to understand support demand.
- Applied predictive analysis and sentiment analysis to healthcare practice data, exploring opportunities to increase revenue and serve patients more efficiently.
- Used Power BI reports to communicate findings on healthcare practice performance, presenting financial and analytical results in an accessible format.

TOPS Infosolutions
Software Developer

- Developed PHP applications backed by relational databases and SQL, supporting application data storage, retrieval and access.
- Integrated REST APIs to exchange application data with third-party services and connect external information with database-backed applications.
- Combined data from multiple sources and databases, supporting consistent and accurate information for analysis and application workflows.

Vsupport Infotech
Software Developer

- Built and maintained PHP and SQL applications supporting client web and e-commerce workflows, including troubleshooting and deployment of updates.

SELECTED PROJECTS

LifeGuard Analytics
github.com/drishtantleuva/life-insurance-retention-analytics

- Built a decision-support application using synthetic affordability-strain data, SQL analysis, predictive modelling, Streamlit dashboards and a customer-level simulator.
- Excluded 12 leakage-prone or unsuitable variables. Gradient Boosting recorded ROC-AUC 0.770 on a 2,500-record holdout used during model selection.
- Used SHAP to explain predictions and documented synthetic-data and proxy-outcome limitations so the scope of the results was clear.

RegRadar
github.com/drishtantleuva/regradar

- Developed a Streamlit regulatory Q&A prototype using semantic retrieval, article-level citations and a threshold to decline unsupported questions.

Fraud Detection Studio
github.com/drishtantleuva/fraud-detection-studio

- Built an XGBoost and Streamlit demonstration that scores simulated card transactions and explains flagged cases with SHAP. Used synthetic fraud patterns to demonstrate investigation workflows, not real-world detection performance.

Explainable Credit Risk Scorer
github.com/drishtantleuva/credit-risk-scorer

- Developed an interactive XGBoost scoring demo with SHAP explanations using the historical UCI German Credit dataset. Presented it as an educational prototype, not a live lending system.

AML Network Explorer
github.com/drishtantleuva/aml-network-explorer

- Modelled synthetic account transfers as directed graphs using NetworkX and PyVis, surfacing structural risk signals and interactive investigation views. Documented the limits of synthetic-data demonstrations.

EDUCATION

Master of Analytics (Research)
University of Technology Sydney

Research focus: carbon-credit social-impact scoring and GenAI-assisted screening of UN SDG claims.

Bachelor of Engineering in Information Technology
Gujarat Technological University

CGPA: 8.25/10

PUBLICATIONS

First author | Springer book chapter | 2026

Quantifying the Social Impact of Carbon Projects and Generative AI Tool for United Nations Social Development Goals Claims Verification. Digital Transformation and Sustainability: Methods and Applications, pp. 49-85. First published online in 2025.
